Machine made stemware and drinkware portfolio represents core position in the company's offer and assortment. RONA is a company with socially responsible, sustainable and environmentally friendly business practices.

The glassworks

We are RONA

RONA has a strong export position, qualified personnel and the most modern technologies. The glassworks in Lednické Rovne, Slovakia is one of the world's leaders in processing of lead-free crystal glass.

The glassworks is trading with a wide range of customers from all over the world and provides them with activities related to the development, production and servicing of beverage glass for households, hotels and restaurants as well as for the airlines and cruise ship companies. Machine made, handcrafted goblets and beverage glasses are covering the basic position in the company's product range.

96% of production is exported and is available in more than 80 countries world-wide. The yearly production of the company exceeds 60 million pieces.

Tradition

SINCE 1892

More than 130 years of tradition

The glassworks was founded in 1892 by the entrepreneur Jozef Schreiber as the last and the largest glassworks of the Viennas company Schreiber und Neffen, which had the most modern technical equipment for its time. The glassworks in Lednické Rovne is the most successful Slovak glassworks in history.

History timeline

1892

Establishment of the glassworks by entrepreneur Jozef Schreiber. It became part of his company Schreiber und Neffen (Schreiber and Nephews).

1893

Launch of pressed (KAISER CRYSTAL) and hand-blown glass (RONA CRYSTAL) production.

1896

Import of the first pantographs, which began to be used for unique glass decoration.

1897

Transformation of the business into the company Sklené huty, formerly Schreiber and Nephews.

1918

Expansion of the production range to lampshades (cylinders) for oil lamps. They were sold under the brand "fine and branded".

1941

Through arization, the glassworks came under the company Stölzle Glasindustrie Aktiengesellschaft.

1942

Independence of the glassworks under the name Slovenské sklené huty, formerly Schreiber and Nephews.

1946

Nationalization of the glassworks, which became part of the state enterprise Slovenské sklárne, n.p. (since 1953 United Glassworks, n.p.).

1947

Outbreak of a fire resulting in serious damage to production premises. Recovery took a year and limited production.

1956

Introduction of the unique technology of pulled stem into serial manual production.

1957

Establishment of the art-technical department in our glassworks.

1959

Glass designer Karol Hološko received an award of honor at the glass exhibition at the Corning Museum of Glass in the USA.

1963

Completion of the gasification of the glassworks.

1981

Launch of the first automatic line for the production of beverage glass.

1992

Transformation of the company into a joint-stock company LR Crystal, a.s..

1992

Organization of the first international glass symposium.

1996

Launch of the automatic forming line for the simultaneous production of goblets and cups.

1998

Change in glass composition to lead-free crystal glass.

2001

Introduction of the technology of pulled stem by double blowing into automatic machine production.

2003

Completion of the structural changes process, resulting in the establishment of the joint-stock company RONA, a.s..

2008

Introduction of the unique laser technology for hot processing of rim edges of goblets.

2016

Introduction of automatic quality inspection in machine production.

2018

Launch of automatic production of ultrathin (ultralight) products, matching the quality of hand-made production.

2023

Extensive reconstruction of buildings as part of the energy efficiency reduction project.

2024

In 2024, RONA completed the construction of a photovoltaic power plant (FVE) that will supply electricity for the company's own use. RONA has also joined a project focused on the modernization and increased efficiency of melting units.

RONA glassware

Scan and play video
Resistance test

Environmentally friendly

The special RONA crystal glass composition doesn't contain lead or any other pollutants or toxins. This makes it safe for your health.

Design and sound

RONA glass is fragile, with unambiguous sound, as brilliant as a diamond. You will discover its beauty at first sight and your lips will touch the essence of the glass art.

Improved resistance

The products are specially strengthened in places where they are particularly vulnerable. Glass is more resistant to scratches and strong impacts.

Brilliance and clarity

Infinite transparency without milk coating is guaranteed by the use of a rare element of the highest quality erbium, used by only a few world producers.

Dishwasher safe

The special and unique glass composition ensures 1000 cycles in the dishwashers with long lasting brilliance.

TOP QUALITY GLASSWARE

RONA products and quality rank the glassworks among the world's leading manufacturers of the table top glassware.

Environmental responsibility

More information in our
Green Book

Reduction of energy consumption

The main goal of RONA, a.s. in energy consumption, is a constant reduction in energy consumption, mainly natural gas. Therefore, the company decided to modernize melting units and include reduction of natural gas consumption in its investment plan, that by 2030, all melting units will melt enamel using electricity either fully, or at least by 50%.

Reduction of greenhouse gas production

RONA will also contribute to the reduction of greenhouse gas emissions and the reduction of dependence on the import of electricity, through the use of renewable energy sources, specifically solar energy. In 2024, RONA completed the construction of a photovoltaic power plant (FVE) that will supply electricity for the company's own use.

Reduction of waste and wastewater generation

Part of the production processes has a water circulation system, where only the necessary amount of water is allowed to evaporate or float on the products. The water used to cool the equipment is treated and cooled in the cooling circuits and subsequently cools the necessary equipment again.

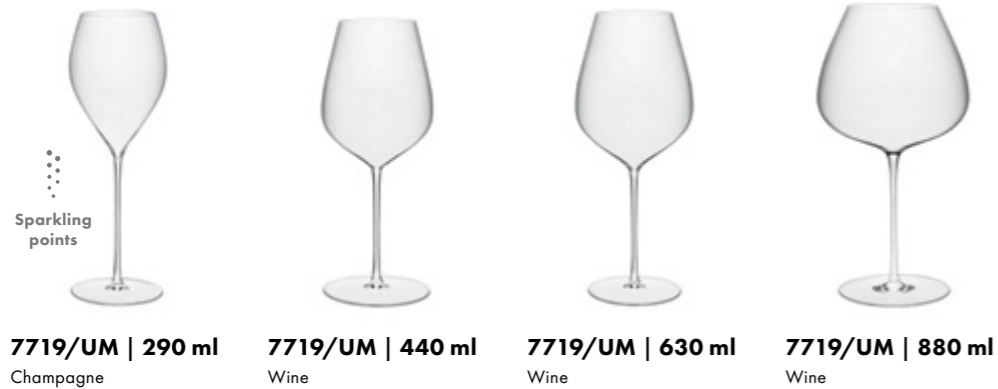

RONA recycles 98% of internal glass shards

RONA recycles 98% of internal glass shards in the melting process. Shards that are not used within the company are handed over for further recycling in the melting process at an external company. As part of recycling, RONA also recycles other types of waste such as paper, plastic and metal waste.

Modern processes

Qualified staff members, right motivation and managing the demanding technologies are the basic principles of RONA's recent success story. It does not concern only application of modern processes for glass making, but also regular improvements of all phases of the production processes with the aim to achieve the best execution of the finished products. At the same time RONA's production complies with the EU environmental legislation.

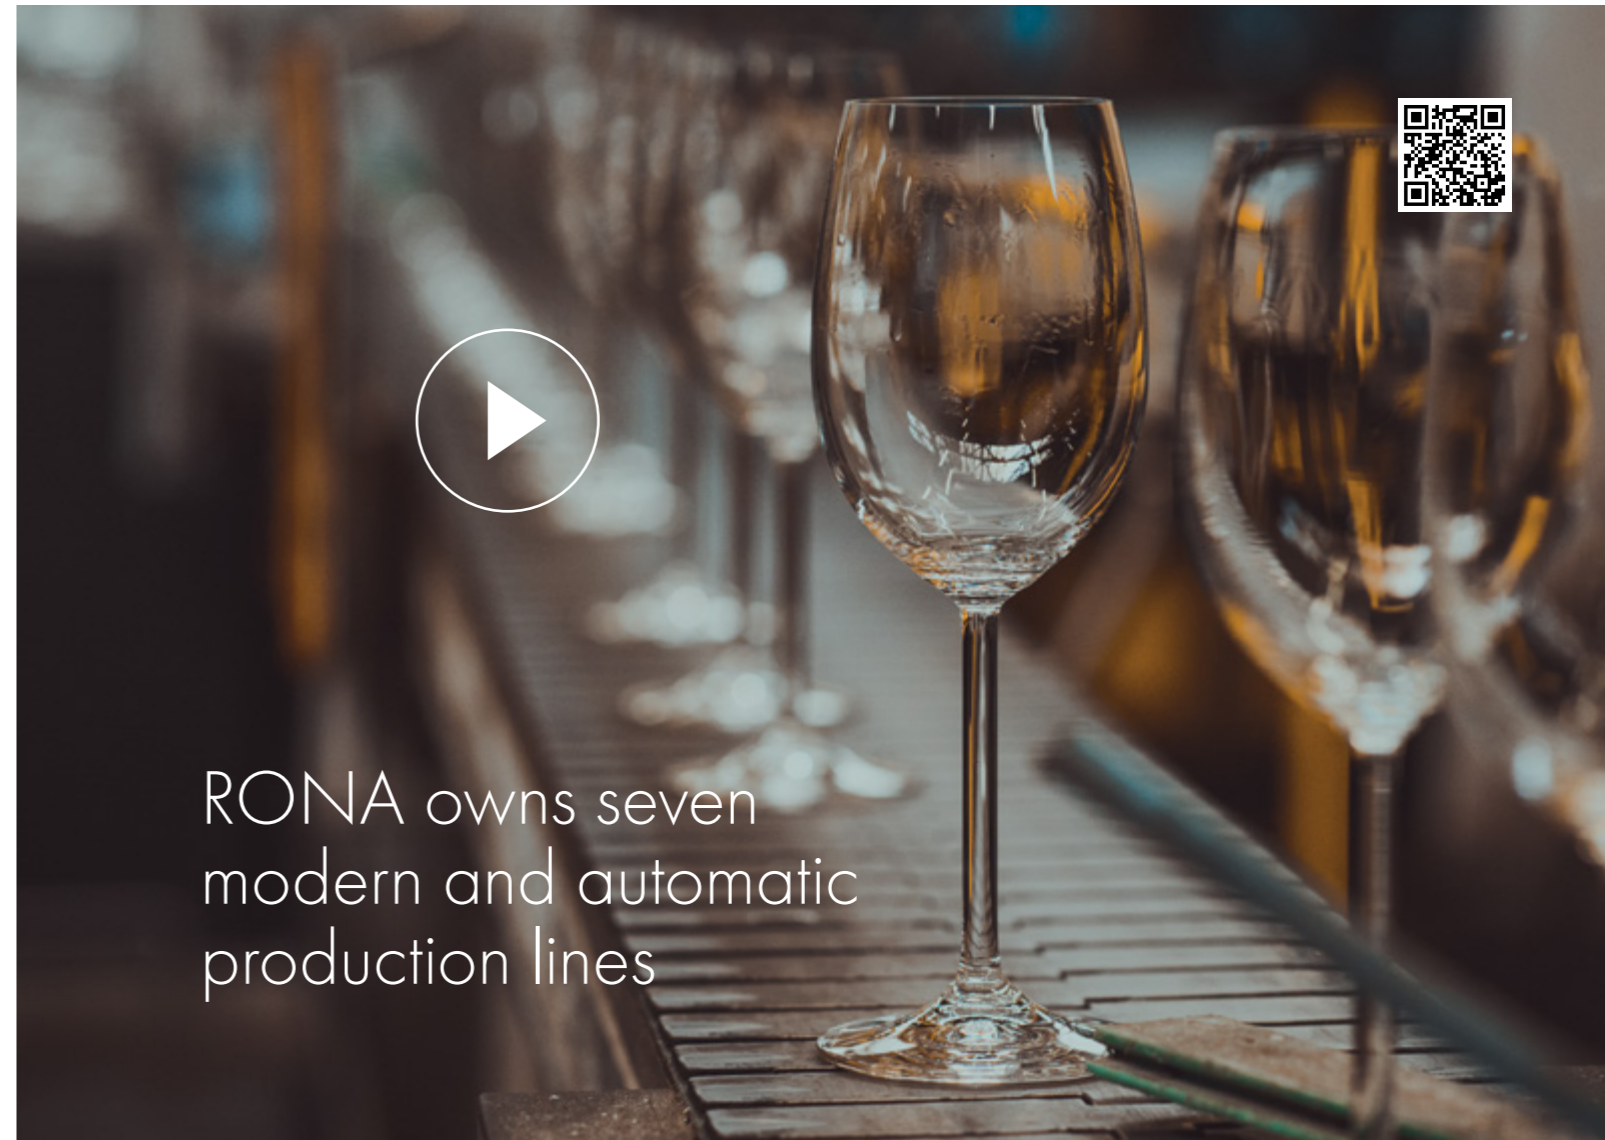

Machine made

Pulled stem technology

In 2001 RONA introduced, as the first company in the world, technology of the so called “pulled stem” into the blow - blow process.

This process creates a monolithic product from the original two – piece process. There are no weak points where stem are joined with bowls and it significantly enhances its mechanical resistance and thus durability. RONA nowadays owns automatic technology processes which simulate handmade production and create products of high quality. In addition RONA has low tooling costs for pulled stem technology and large portfolio of ready molds.

Success brings motivation and a challenge for further advancement and development, not only in technology but also in overcoming obstacles in a professional and expert manner. Today’s master glassblower replaces the traditional glassblowing pipe with a complex technical mechanism and through its optimal configuration, gives life to the glass that is indistinguishable from a hand-blown goblet.

RONA owns seven modern and automatic production lines

MODERN TECHNOLOGIES

Our products represent an exciting combination of elegance and technology in addition to creative design, fine cold – cut rims and beautifully drawn stems that are synonymous with RONA glassware.

500 million pulled stem production

Year 2025 was a monumental milestone for our company: the production of 500 million pulled stem pieces! This achievement is a testament to the hard work, dedication, and innovation that our team has put into every product we create. Reaching this number isn't just about quantity; it's a reflection of our unwavering commitment to quality and precision. Each piece represents the expertise and passion of our employees, as well as the trust our customers place in us.

Ultralight glassware

Year 2018 brought another world's first in the form of ultralight machine made stemware, which was introduced by RONA and provides quality and properties of hand made products, however, made by the machine, hence the expression "Hand made by machine". Thin-walled and ultralight weight goblets with pulled stem and superior design - embodying all the elements of handcrafted glass. The unique technology, combined with expertise and passion, brings a new dimension to the range of glass products - a machine made product with the quality and properties of hand-blown glass.

The Gala glassware collection, a RONA staple for almost 30 years, has been upgraded with a modern "pulled stem" design. This new design improves durability, with better breakage resistance, and offers a more seamless, elegant look by integrating the foot into the chalice, enhancing both strength and aesthetics.

The amazing clarity and longevity due in large part to the unique platinum glass process

Clarity and longevity

The traditional choice for water, glass is durable, non-reactive, and doesn't affect the taste of the water. These glasses often come in classic forms like tumbler-style or highball glasses, and are prized for their clarity and longevity. They can also be easily washed and are dishwasher-safe.

The cylindrical tumblers from the Classic series boast clean, classic lines and are ideal for serving a wide range of drinks. With thicker walls for durability and a higher base for stability and luxury, this series is perfect for whiskey, mixed drinks, water, or juice.

Luxury that you can have on hand every day and enjoy it's close presence

Brilliant and diamond

The RONA cut glass has a clearer and more "brilliant" appearance. There is a vast difference in clarity and brilliance between cut glass and pressed glass. Cut glass is always more valuable than pressed glass. Listen to the glass. When you gently thump a piece of RONA cut glass it will ring and sing back to you. Pressed glass does not make a ringing sound.

The right glassware helps enhance the aesthetic appeal

Glassware for beer

Glassware for beer plays a significant role in enhancing both the sensory experience and the overall enjoyment of a beer. The shape, size, and design of a beer glass can influence how the beer looks, smells, and tastes. The right glassware helps enhance the aesthetic appeal by showcasing the beer's color, clarity, and carbonation. More importantly, it improves the olfactory experience by funneling aromas toward the nose, which is crucial for fully appreciating the complexity of the beer's flavors.

Decorative techniques

RONA glassworks is capable of using an almost unlimited variety of decorating techniques to embellish the clear glass. Such as pantograph etching, diamond cutting, hand painting of metallic rims (gold and platinum), hand painting of luster colors, spraying of organic colors, sand blasting, screen printing, and applying decals. Our decorations open new opportunities and markets.

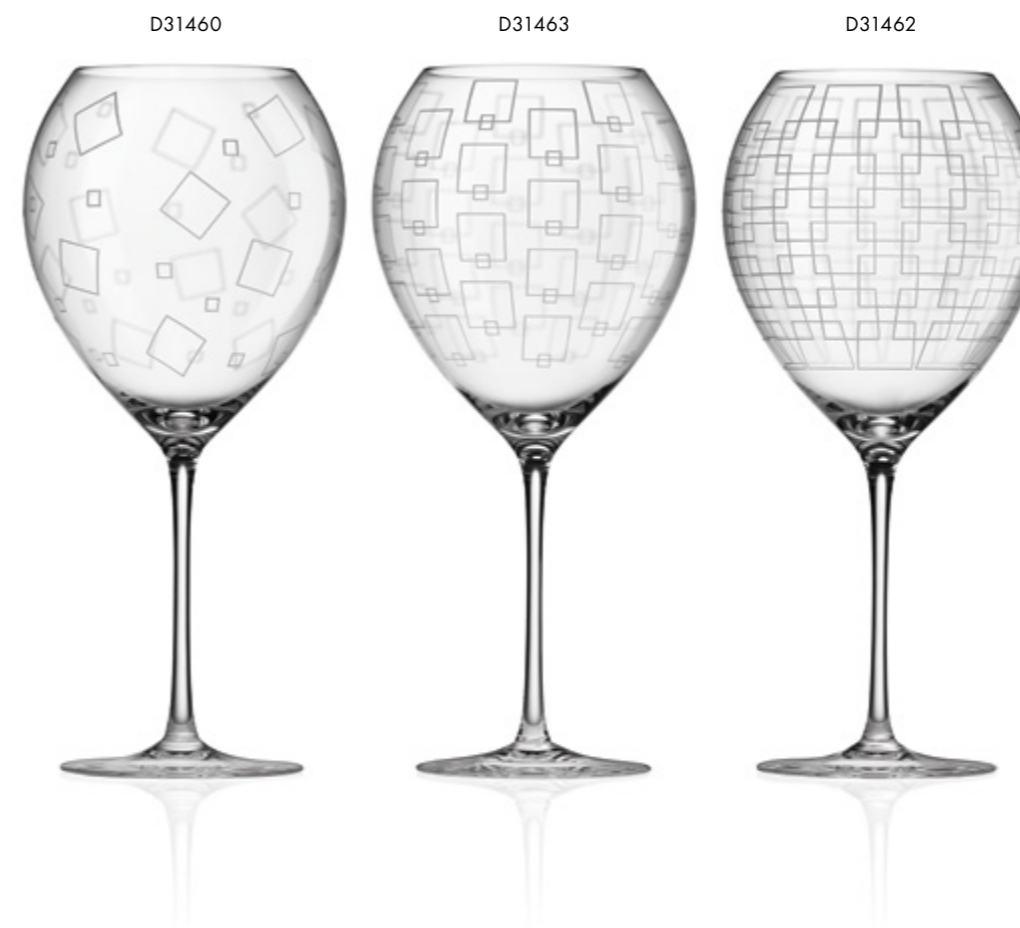

More information about
Decorations

Pantograph etching

RONA is proud to be the 1st factory in central Europe where the pantograph machines were installed – back in 1896. Pantograph remains one of the most challenging techniques for glassware decoration. First, an experienced craftsman must apply wax onto the product and then use a system of needles to draw the desired pattern. The cup is then inserted into an acid bath which finishes the process. The product can be further decorated, for example by adding a gold finish, or by coloring.

Diamond engraving

Engraving is done by a diamond mounted on a small disc. The product is placed under a stream of running water and the diamond is used to engrave elegant shapes and patterns onto glass surface. Although diamond is the hardest element in nature, our specialists are able to cut the glass in soft, smooth lines.

Painting and combinations

Handpainting of metallic rims and bands of varying widths as per your request. A form of liquid gold or platinum is used. Hand painting with luster colors on the bowls of the stemware or barware. Large color palette available to choose from.

Screen printing technique

Color screen print decorations, located on the foot or on the bowl of a stemmed glass, or on the bottom or side of a tumbler, are ideal for your private branded corporate gifts. Ideal solution for your custom tailored decorated projects.

Machine and hand cutting

RONA offers a wide range of both, machine cutting and hand cutting capabilities. The range of cuttings includes traditional and contemporary designs. The cuts can be either polished and/or grey cuts in order to fully enhance brilliance and clarity of the glass. Cut glass is always more valuable than pressed glass.

Spraying

This technique is commonly used to create gradient or ombre effects on the glass, giving it a unique and artistic appearance and accommodate a wide range of shades and color types. Transparent, matt, shiny or metallic, RONA's spraying method can do it all. Overall, the spraying method of decorating wine glasses can be a fun and creative way to add a unique touch to your glassware collection.

NEW * In 2024, RONA acquired automatic spraying machine.

Sandblasting

Glass sandblasting is a technique used to carve designs into the surface of glass using a high-pressure stream of sand or other abrasive materials. This technique is often used to create intricate designs, patterns, or lettering on glass objects. To sandblast glass, the surface of the glass is first cleaned and then covered with a stencil or masking tape that has the desired design cut into it. The exposed areas are then blasted with the abrasive material, which erodes the surface of the glass and creates a frosted or etched effect in the design.

Other techniques

3D laser engraving ^{NEW}

Once your logo is programmed into the engraving machine, the laser converts light energy into heat, and directs that onto your item. Use laser engraving for your detailed logo, or in conjunction with other decoration methods.

Pad printing

Also called tampography or tampo printing, is typically used for applications where print quality, precision or a complex shape are involved. It is cost-effective, provides multiple color options and delivers detailed, high-quality image on your glass.

Calibrating

Naturally, calibrating is commonplace for any glassworks with any ambition in the hospitality industry. RONA provides calibration according to the European Union regulations either by laser etching, screen printing or sandblasting, according to the client's preferences and needs.

Decal

Is a decorative technique by which engravings and prints are transferred onto your glass. Decal is a special technique, which can make the decoration vivid and enduring.

Shapes suitable for cutting

RONA offers a wide range of both, machine cutting and hand cutting capabilities. The range of cuttings includes traditional and contemporary designs. The cuts can be either polished and/or grey cuts in order to fully enhance brilliance and clarity of the glass.
